

Searching with a Map

Searching with Maps

To use Map Search, begin by selecting **Search MLS Listings** and entering your search criteria. Once your results load, click **Tools** and select the **Map** view (you can access the **Tools** menu again and choose to make Map your **Default Search View**).

The Map view displays an interactive map in the center with listings shown alongside it. Selecting a property from the list will highlight its location on the map, and clicking directly on a map marker will preview the listing details.

Refining Your Search on the Map

You can narrow your results directly on the map using the drawing tools located in the upper right corner:

- **Hand Tool** allows you to move the map when zoomed in
- **Freehand Shape** lets you draw a custom boundary
- **Circle Tool** allows you to draw a defined circular search area
- **Radius Search** lets you enter a specific mile radius from a chosen point

As you draw on the map, results automatically update to show only properties within the selected area.

Use the button to remove any drawn shape and return to your original search results.
